The conceptual design of chemical processes is a challenging task. Although systematic methods for process design have been developed in the last 25 years, only a few contributions address the simultaneous design and optimization of reaction and separation.

Conceptual design is the first step of the multiphase process involved in creating a new product. Whether it's a building, software application or gadget, it's important to come up with a general concept before proceeding. The conceptual design phase is immediately followed by the schematic design

Siirola, Eastman

The conceptual process design can start with defining functions (tasks) and integrating these into a process design containing novel process units.

Siirola, Eastman Chemicals Corporation describes his method in general terms with the following functions most common to the chemical process
