Language is a second SAS programming language for string manipulation.

Characteristics of the language are:

- strings are sequences of characters
- all input to the macro language is a string
- usually strings are SAS code, but they don't need to be
- the macro processor manipulates strings and may send them

243-29: SAS Macro Programming for Beginners

Macro variables are tools that enable you to dynamically modify the text in a SAS program through symbolic substitution. You can assign large or small amounts of text to macro variables, and after that, you can use

File Type PDF Introduction To The Sas Macro Language Lex Jansen

that text by simply referencing the variable that contains it. Macro variable values have a maximum length of 65,534 characters.

Introduction to Macro Variables - SAS Support

The SAS macro language is a string based language. It does not support the

File Type PDF Introduction To The Sas Macro Language Lex Janson

use of hexadecimal character constants.
Note: The SAS macro language does not support using hexadecimal values to specify non-printable characters. When you use a macro facility name in a SAS program or from a command prompt,
