Physical Geography Of Southeast Asia

Physical features of Southeast Asia include mountain ranges, plains, peninsulas, straights and islands. Vietnam and Indonesia are well-known for their mountain ranges. The tallest mountain in Southeast Asia is Hkakabo Razi in Myanmar, which is more than 19,000 feet high.

What Are the Physical Features of Southeast Asia?

Southeast Asia or Southeastern Asia is the southeastern region of Asia, consisting of the regions that are geographically south of China, east of the Indian subcontinent and north-west of Australia. Southeast Asia is bordered to the north by East Asia, to the west by South Asia and the Bay of Bengal, to the east by Oceania and the Pacific Ocean, and to the south by Australia and the Indian Ocean.

Southeast Asia - Wikipedia

Southeast Asia, vast region of Asia situated east of the Indian subcontinent and south of China. It consists of two dissimilar portions: a continental projection (commonly called mainland Southeast Asia) and a string of archipelagoes to the south and east of the mainland (insular Southeast Asia). Extending some 700 miles (1,100 kilometres) southward from the mainland into insular Southeast Asia is the Malay Peninsula; this peninsula structurally is part of the mainland, but it also shares ...

Southeast Asia | Britannica

- The Mekong River in Southeast Asia travels through a basin rich in natural resources. The river originates on the northern slope of the world's tallest mountains, the Himalaya Range, and then drops elevation quickly through steep mountain gorges, tumbling out of China into Myanmar (Burma) and the Lao People's Democratic Republic (Lao PDR).

Physical Geography of Southeast Asia

ying east of India and south of China, Southeast Asia juts out from the rest of the Asian continent and then fragments into a jumble of islands that straddle the Equator.

Chapter 29: The Physical Geography of Southeast Asia

Southeast Asia is a land of collisions – both cultural and physical. Straddling the boundaries of four separate tectonic plates, this region is constantly reshaping itself – shifting, colliding, and often erupting. From the deepest spot on the ocean floor to some of the most active volcanoes in the world, this is a region of extremes.
